VENI VIDI VICI

A HANDS-ON CYBERSECURITY CAPTURE THE FLAG EXPERIENCE

Veni Vidi Vici is designed to move beyond isolated cybersecurity puzzles and expose participants to realistic security environments.

Participants are expected to investigate unfamiliar systems, identify attack surfaces, discover vulnerabilities, exploit weaknesses and progress toward meaningful objectives.

The competition is organized around six cybersecurity domains, with a carefully designed set of challenge environments and multiple difficulty levels, providing a comprehensive, hands-on learning and competition experience.

THE SIX DOMAINS

NETWORK SECURITY
ANALYZE

OUR PHILOSOPHY

"Think like an attacker, reason like a defender."

- Practical security reasoning
- Hands-on exploitation
- Real-world inspired scenarios
- Multi-stage attack paths
- Cross-domain security thinking
- Safe sandboxed environments

SAME CURIOSITY BIGGER CHALLENGES

THE VVV PHILOSOPHY

PEOPLE
IDEAS
SECURITY
TOMORROW

REAL
CHALLENGES
REAL
SKILLS
REAL
IMPACT

DON'T JUST FIND THE FLAG.
UNDERSTAND THE SYSTEM.

VVV is designed around realistic security scenarios where participants must investigate systems, understand their architecture, identify weaknesses and reason through an attack path.

A REALISTIC ATTACK PATH

FROM CURIOSITY TO COMPROMISE TO COMPLETION

DEFEND

BUILD
HACK
COLLABORATE
A STRONGER
TOMORROW

A flag should represent meaningful progress through a security problem rather than simply being hidden text."

THE CORE EXPERIENCE

INVESTIGATE › REASON › EXPLOIT › PROGRESS › ACHIEVE

01 UNDERSTAND
Understand the environment and its components.

02 ENUMERATE
Identify exposed services, interfaces and attack surfaces.

03 DISCOVER
Find vulnerabilities, misconfigurations or trust-boundary weaknesses.

04 EXPLOIT
Use the discovered weakness to obtain meaningful access.

05 EXPAND
Move through the environment where the challenge requires additional access, credentials or privileges.

06 ACHIEVE
Reach the final objective.

OUR PRINCIPLES

REALISTIC ATTACK SURFACES
Based on real-world systems and scenarios.

MEANINGFUL EXPLOITATION
Focus on techniques, not trivial puzzles.

PROGRESSIVE DIFFICULTY
A structured learning curve across challenges.

MULTI-STAGE OBJECTIVES
Go beyond a single step towards deeper goals.

CROSS-DOMAIN REASONING
Combine knowledge across multiple domains.

SAFE SANDBOXED EXECUTION
A secure environment for hands-on exploration.

SAME CURIOSITY, BIGGER CHALLENGES.

PEOPLE
IDEAS
SECURITY
TOMORROW

SIX DOMAINS.
ONE SECURITY ECOSYSTEM.

VVV covers multiple layers of modern cybersecurity, allowing participants to approach security problems from infrastructure, application, identity, cryptographic and AI perspectives.

01 NETWORK SECURITY

Focus:
Reconnaissance, service enumeration, packet analysis, protocol security, internal discovery and pivoting.

02 APPLICATION SECURITY

Focus:
Web and API security, authentication, authorization, injection, SSRF, path traversal, IDOR/BOLA, sessions, file uploads and business logic.

03 CLOUD SECURITY

Focus:
IAM, least privilege, excessive permissions, storage exposure, secrets, service-to-service trust, metadata access and cloud privilege escalation.

VENI VIDI VICI

CYBERSECURITY
CAPTURE THE FLAG

04 SYSTEM SECURITY & PRIVILEGE ESCALATION

Focus:
Linux and Windows permissions, SUID/SGID, capabilities, sudo, services, scheduled tasks, credential discovery and privilege boundaries.

05 APPLIED CRYPTOGRAPHY

Focus:
Cryptanalysis, symmetric misuse, nonce/IV misuse, weak randomness, RSA weaknesses, key management, signatures and cryptographic protocol weaknesses.

06 AI SYSTEMS SECURITY

Focus:
Prompt injection, context manipulation, RAG security, retrieval poisoning, vector-store access control, AI agents, tool/API abuse and excessive permissions.

REAL
SCENARIOS
REAL
SKILLS
A SAFER
TOMORROW

VVV challenges are designed around systems and situations rather than disconnected vulnerability puzzles.

SCENARIO COMPONENTS

01 ATTACK SURFACE
Participants identify what is exposed.

02 INITIAL ACCESS
Participants identify a viable entry point.

03 ENUMERATION
Participants investigate the compromised environment.

04 CREDENTIAL / SECRET DISCOVERY
Participants identify information that enables further access.

05 ACCESS / PRIVILEGE EXPANSION
Participants move toward more privileged or protected resources.

06 FINAL OBJECTIVE
Participants reach the meaningful target of the scenario.

EXAMPLE SCENARIO

A company has deployed an internal application connected to protected services. A security boundary has been incorrectly implemented.

The participant must:

1. Identify the exposed application.
2. Understand the application's behavior.
3. Discover the security weakness.
4. Obtain initial access.
5. Enumerate the environment.
6. Access a protected internal resource.
7. Reach the final objective.

KEY TAKEAWAY

"The challenge should reward understanding of the system and attack path, not merely the ability to locate a hidden string."

THE ADAPTATION PIPELINE

1. INDUSTRY SCENARIO
Real-world problem statement, scenario or vulnerability class.

2. VVV TECHNICAL ADAPTATION
Adapted into a competition-ready challenge environment.

3. SANDBOX / SAFETY REVIEW
Reviewed and deployed in an isolated and controlled environment.

4. CTF CHALLENGE
Integrated into VVV with appropriate difficulty and structure.

5. PARTICIPANT EXPERIENCE
Participants solve, learn and gain real-world skills.

PARTNERS CAN CONTRIBUTE

PROBLEM STATEMENTS
Provide a real-world inspired security problem.

SECURITY SCENARIOS
Share an industry-relevant attack or defensive scenario.

TECHNICAL EXPERTISE
Help shape the technical depth of a challenge.

CHALLENGE SPONSORSHIP
Support development of a challenge around a relevant security domain.

MENTORSHIP
Interact with participants through technical discussions or challenge-related sessions.

Sponsor-provided scenarios are adapted into controlled competition environments.
Participants should never receive access to real production systems, credentials or infrastructure.

VVV creates opportunities for companies to engage with technically motivated students through cybersecucity challenges, technical participation and industry interaction.

BRIDGING INDUSTRY AND TOMORROW'S SECURITY LEADERS

01 BRAND VISIBILITY

Position the company within a focused cybersecucity and technology event environment.

02 TALENT IDENTIFICATION

Interact with participants demonstrating practical security problem-solving skills.

03 TECHNICAL ENGAGEMENT

Introduce participants to real-world security problems, technologies and engineering practices.

TECHNICAL ENGAGEMENT OPTIONS

01 TECHNICAL TALKS
Share practical cybersecurity knowledge, industry experience or emerging security topics.

02 WORKSHOPS
Conduct hands-on sessions around relevant security technologies or practices.

03 CHALLENGE AUTHORSHIP
Collaborate with VVV on an industry-inspired security challenge.

04 MENTORSHIP
Interact with participants around technical problem-solving and cybersecurity careers.

05 SECURITY CASE STUDIES
Bring real-world security scenarios into the competition ecosystem.
